QUASAR
Intelligent optical sorter

- High-Resolution cameras
- Advanced SWIR infra-red sensors
- True-Shape technology
- Advanced kernel feature analysis
- Higher throughput
- Sniper Ejector Logic
- New user interface
- IP65 rating
ASM QUASAR
The Intelligent optical sorter

The ever-stringent quality standards are creating new technical challenges for big and small businesses alike. Helping our customers increase final quality has been the main drive behind the development of Sesotec ASM’s sorting technology and lead to the creation of an entirely new optical sorting machine, designed specifically to meet the new challenges in quality control: the ASM QUASAR.

Total accuracy
We developed a completely new optical processing architecture called Logic, which is the heart of the machine. This is a combination of very powerful hardware and advanced software algorithms, that closely mimic how the human brain processes visual information.

QUASAR judges many different parameters at the same time, including colors, textures, shapes and size. Because QUASAR judges all of these parameters as a whole, rather than one by one, it is very accurate in deciding what to keep or reject, and incredibly easy to use.

Performance features

- **High-Resolution** cameras with **True-Color** image processing technology.
- **Advanced SWIR infra-red** sensors can sort defects based on physical and organic characteristics.
- **True-Shape** technology differentiates objects by shape and size, at high speed.
- **Advanced kernel feature analysis** opens new sorting possibilities.
- **Higher throughput** thanks to a dedicated, **upgradable** optical processing architecture with **high-speed image analysis**.
- **Sniper Ejector Logic** reduces product loss to a bare minimum by dynamically adjusting ejector activity according to contaminant type.
- **Even easier to use**, with a new user interface and intelligent-learning features.
- **IP65 rating**, fully dust-proof and water resistant, built for reliability in the most demanding environments.
Simplified user interface

Tap to sort: create a sorting program in 5 minutes
Thanks to the Intelligent-Learning System, creating a program is as simple as taking a snapshot of a contaminated product sample. The machine takes a picture of the product as it falls, the user can then tap with a finger the defects to be removed. QUASAR does the rest, by dynamically creating the correct sorting parameters in order to achieve the best sorting results.

Higher throughput, increased yield
QUASAR has the widest chutes on the market, paired with lightning-fast processing speed and unprecedented ejector accuracy. It can sort even the smallest products with minimal false-rejects. Available in models from 1 up to 6 chutes, to satisfy any production need.

Minimal operational costs
Quality construction, energy-efficiency, ease of use and incredible accuracy: these are the qualities that make QUASAR a leader not only in performance, but in cost-effectiveness too. QUASAR provides a higher yield, higher throughput and increased up-time in a single, reliable sorting solution.
Sesotec system world

Detecting and separating contaminants:
- Removing contaminants:
  - metals
  - plastics
  - glass
  - ceramics, porcelain, stones
  - and many others
- Removing from (good material):
  - bulk materials
  - liquids and pastes
  - individually packaged product
  - packed and loose items

Product types:
- end-products (food, textiles, plastics etc)
- industrial raw materials
- recycled materials
- can be integrated into all types of conveyor systems

Detecting and separating sub-standard products:
- Qualitative defects:
  - incorrect colour
  - agglomerations
  - breakages
  - air inclusions in packs
  - incorrect positioning / distribution
- Quantitative defects:
  - incorrect weight
  - count errors (incorrect number of items in package)

Product types:
- end-products (food, textiles, plastics etc)
- industrial raw materials
- recycling materials
- can be integrated into all types of conveyor systems

Sorting mixed materials into single fractions:
- Types of material:
  - glass
  - plastics
  - metals
  - and many others
- Delivery flows:
  - bulk materials
  - individually packaged product
  - can be integrated into:
    - conveying systems
    - bulk material flows
